

FOR VENDORS

Run your Splitt business from ChatGPT.

How to connect ChatGPT to your Splitt account, what you can ask it to do, and how you stay in control of every change.

● ChatGPT on the web

JUST RENT. JUST GO.

Splitt in ChatGPT
Vendor guide · September 2026

SPLITT IN CHATGPT

Ask in plain words. ChatGPT does it in Splitt.

Splitt has an MCP server: a secure connection that lets AI assistants such as ChatGPT use Splitt for you. (MCP, the Model Context Protocol, is the open standard ChatGPT uses to connect to other services.) Add Splitt to ChatGPT once, sign in with your Splitt account, and then just ask: update a listing, block out dates, check today's pickups or reply to a renter.

Your login

You sign in on Splitt's own page. ChatGPT never sees your password.

Your access

ChatGPT can only do what your Splitt account can do. Nothing more.

Your call

ChatGPT asks you to confirm before it changes anything in Splitt.

No cards

Payments only happen on Stripe's checkout page, never in the chat.

How it works

STEP 1

Turn on developer mode

One switch in ChatGPT's settings, under Security and login.

STEP 2

Add Splitt

Paste the Splitt server address into ChatGPT and choose OAuth sign-in.

STEP 3

Sign in with Splitt

Use your Splitt email and password, or Google.

STEP 4

Ask ChatGPT

Pick Splitt in a chat and say what you need. You confirm each change.

What ChatGPT can work with

Your listings, prices and calendar, bookings, pickups and returns, messages, reviews, claims, experiences you host and, for account owners, earnings and payouts. The same things you manage in your Splitt vendor dashboard.

Good to know. Setup takes about five minutes and you do it once. You need a computer: developer mode is set up on ChatGPT's website.

WHAT YOU NEED

Four things to have ready

Check these first. Each one takes a minute, and together they cover almost every setup problem vendors run into.

1 A ChatGPT plan with developer mode
Plus, Pro, Business, Enterprise or Edu. The free plan does not include it. On a Business, Enterprise or Edu workspace, your ChatGPT admin may need to allow developer mode for you first.

2 ChatGPT in a web browser
Set up Splitt at **chatgpt.com** on a computer. Developer mode is only available on the web, and your browser must allow the Splitt sign-in window to open.

3 Your Splitt vendor login
The email and password you use on go-splitt.com, or your Google sign-in. If two-step verification is on, keep your email open for the code.

4 The Splitt server address
You paste this into ChatGPT in step 2. Type it exactly, including /api/mcp at the end.

`https://mcp-server-splitmygear.vercel.app/api/mcp`

SPLITT SERVER ADDRESS

Sign in with the right account

ACCOUNT OWNER

Everything in this guide, including earnings, payouts and your Stripe payout account.

MANAGER OR STAFF

What your seat allows in the vendor dashboard. Earnings and payouts are owner-only, and staff can't change pricing rules.

RENTER ACCOUNT

No vendor tools at all. If ChatGPT can't see your listings, check which account you signed in with.

One connection, one Splitt account. ChatGPT acts as whoever signed in. If several people on your team use ChatGPT, each person connects with their own Splitt login, so every change is made under their name and within their permissions.

STEPS 1 AND 2 · IN CHATGPT

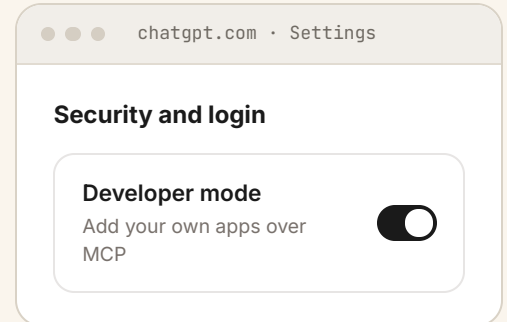

Add Splitt to ChatGPT

Both steps happen in ChatGPT's settings on chatgpt.com. You only do them once.

1 Turn on developer mode

1. Open **chatgpt.com** and sign in.
2. Open your profile menu and choose **Settings**.
3. Go to **Security and login** and turn on **Developer mode**.

OpenAI calls developer mode powerful, and apps you add yourself are not reviewed by OpenAI. The Splitt server is run by Splitt, and the rest of this guide shows how you stay in control of what ChatGPT does with it.

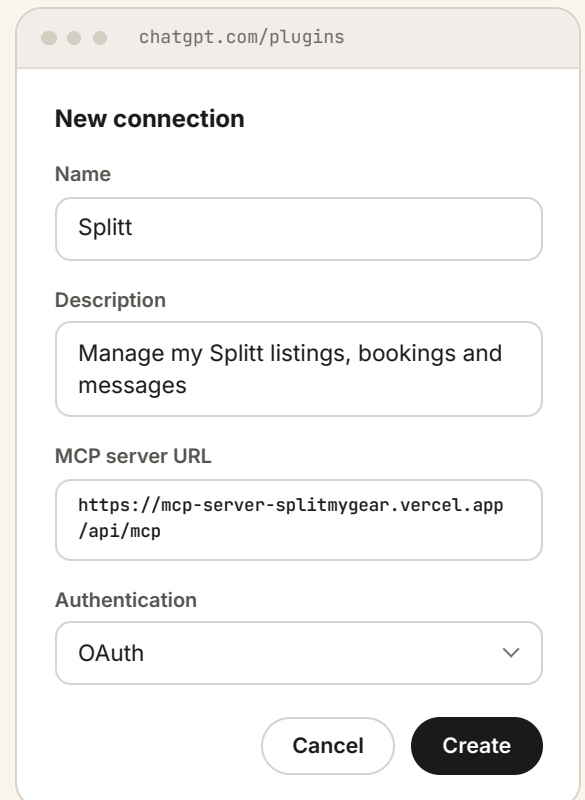

2 Create the Splitt connection

1. Open the **Plugins** page (**chatgpt.com/plugins**) and select the **+** button.
2. Fill in the form as shown:

Name	Splitt
Description	Manage my Splitt listings, bookings and messages
Connection	The Splitt server address from page 3. Splitt's server is public, so you don't need a tunnel.
Authentication	OAuth

3. Select **Create**. ChatGPT sends you to Splitt to sign in (step 3), then loads the Splitt tools.

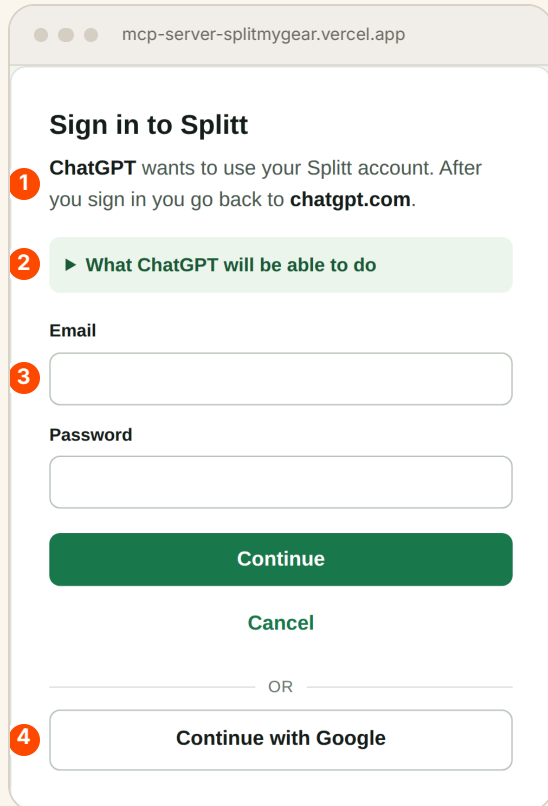

Your screen may look a little different. These drawings show which field gets what; they are not screenshots. ChatGPT renames its menus from time to time: older versions call plugins **Apps** or **Connectors**, and the developer mode switch used to sit under Apps, then Advanced settings. If ChatGPT asks you to confirm that you trust the server, read the notice and continue.

STEP 3 · ON SPLITT

Sign in on Splitt's own page

ChatGPT opens Splitt's sign-in page in a new window. The page belongs to Splitt, not ChatGPT: your password goes straight to Splitt and ChatGPT never sees it.

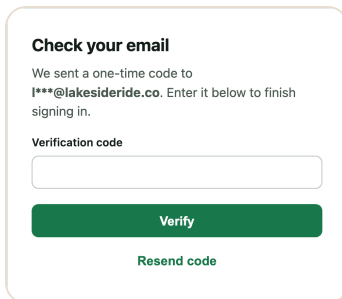

- 1 Who is asking, and where you go next**
The page names the app, **ChatGPT**, and where you go back to after signing in: **chatgpt.com**. If it names anything else, close the window and don't sign in.
- 2 What ChatGPT will be able to do**
Open this to see the full list of access: the twelve items on page 8. It covers everything a Splitt account can do; your role still decides what actually works, so a manager's seat never gains owner powers. The exact return address is at the end of the list.
- 3 Your Splitt login**
Enter the email and password you use on go-splitt.com and select **Continue**.
- 4 Signed up with Google?**
Use **Continue with Google** instead.

The Splitt sign-in page, from Splitt's own code.

Two-step verification

If it's on for your account, Splitt emails you a one-time code. Enter it and select **Verify**. It applies to Google sign-in too.

Done. Splitt sends you back to ChatGPT and the connection is ready. You won't need to sign in again each time: ChatGPT renews its access in the background using your Splitt session.

STEP 4 · IN CHATGPT

Ask in plain words

Turn Splitt on in a chat and ask for what you need, the way you'd ask someone on your team. ChatGPT looks things up straight away and asks you before it changes anything.

chatgpt.com

Splitt is on for this chat

Which of my rentals start this weekend?

Used Splitt · Bookings on my listings

You have two pickups on Saturday, October 3: the **Tandem Kayak** (Jordan, 9:00 AM) and the **Paddle Board** (Sam, 10:30 AM). Both are confirmed.

Block the paddle board on October 10 and 11. It's going in for repairs.

Confirm action	Splitt · Block dates
Listing	Paddle Board
Dates	October 10 to 11
Note	Repairs

Deny
Confirm

Done. The Paddle Board can't be booked on October 10 or 11. Bookings you already had weren't changed.

An example chat, drawn to show the flow. ChatGPT's own screens look different.

1 Turn Splitt on
In a new chat, select + next to the message box, then **Developer mode** (in some versions **More**), and switch on Splitt. In some versions you can also type @ and pick Splitt.

2 Looking things up is instant
Bookings, calendars, messages and numbers are read straight away. Reading never changes anything in Splitt.

3 Changes wait for you
Anything that creates, changes, sends or deletes shows what it's about to do and waits for your **Confirm**. Nothing happens if you deny it.

4 Use names, not codes
Say "the Tandem Kayak" or "Jordan's booking". ChatGPT finds your listings, bookings and conversations itself, so you never need an ID or a link.

Check what matters. ChatGPT can make mistakes. For prices, cancellations and money, look at the result in your Splitt vendor dashboard too.

WHAT YOU CAN ASK

Things vendors ask Splitt to do

Splitt gives ChatGPT more than 200 actions, from listings to payouts. These are starting points: ask in your own words.

Listings

- “ Draft a listing for a 2-person inflatable kayak with pump and paddles. Keep it unpublished so I can check it.
- “ Copy my Tandem Kayak listing into a new draft for the blue one.
- “ Which of my listings got the most views and bookings since June?

Calendar

- “ Block the RV from November 2 to 6 for servicing.
- “ What dates have I blocked on the Lake Cabin?
- “ Connect my Airbnb calendar to the Lake Cabin. Here's the iCal link: ...

Pricing

- “ What's a good starting price for my new e-bike listing?
- “ Charge 20% more for the Lake Cabin from June 15 to August 31. **OWNER, MANAGER**
- “ What would dynamic pricing charge for the kayak next weekend? Don't change anything.

Bookings

- “ Which pickups and returns do I have this week?
- “ Is the new RV booking risky? Check it for me.
- “ Sam hasn't returned the paddle board. Mark the booking overdue.

Messages and reviews

- “ Do I have unread messages? Summarize them.
- “ Draft a friendly reply to Jordan about the 9 AM pickup. Show me before you send it.
- “ Thank the reviewer on my kayak's latest review.

Experiences and services

- “ Add a Saturday 8 AM slot with 6 spots to my sunrise paddle tour.
- “ Who's booked on my tours this week?
- “ Create a draft service: a one-hour e-bike lesson for \$45.

Fleet and gear care

- “ How many of my e-bikes are available, rented or in maintenance?
- “ Put e-bike #3 into maintenance.
- “ Log a tune-up for e-bike #3 and put it back in service.

Money and reports

- “ How did I do this quarter? Bookings, revenue and occupancy.
- “ Show my 2026 tax summary as a CSV.
- “ What's my available balance? Pay it out. **OWNER**

Also in Splitt for ChatGPT: damage claims and extra charges, waivers and insurance policies, routes and GPX tracks, paid promotions, message templates, auto-approve and your report emails.

WHO CAN DO WHAT

ChatGPT gets your access. Nothing more.

ChatGPT works through your own Splitt seat. Splitt checks every request against the same permissions as your vendor dashboard, every time.

IN CHATGPT	OWNER	MANAGER	STAFF
Earnings, payouts and your Stripe payout account	✓	—	—
Seasonal rates and dynamic pricing	✓	✓	—
Auto-approve, report emails and the tax summary	✓	✓	✓
Everything else: listings, calendar, bookings, messages, reviews, claims, experiences, fleet	Same as your seat in the vendor dashboard		

Renter accounts get no vendor actions at all. Your role also decides what works when ChatGPT tries: if your seat can't do something, Splitt says "Not allowed for this account" and nothing changes.

What you agree to at sign-in

The Splitt sign-in page lists twelve kinds of access under "What ChatGPT will be able to do", in these words. ChatGPT receives all twelve; your role still decides what actually works.

- 1 Search and read public listings, experiences, availability, prices and reviews.
- 2 See and update your account profile, settings, notifications, trust score and personalised recommendations.
- 3 See, create, change and cancel bookings you are part of as renter or as the gear owner (rentals, experiences, services), pay through Stripe links, sign waivers and complete pickup and return checks.
- 4 See and manage your saved listings, searches and trips.
- 5 Read your conversations and send messages on your behalf.
- 6 Write, edit and delete your reviews and, for vendors, respond to reviews of your listings.
- 7 Create and manage your listings, pricing, availability and vendor catalogue.
- 8 Vendor-only booking operations on your listings: incoming bookings, overdue and return status, reschedule proposals, private notes, auto-approve and booking risk.
- 9 Create and manage the experiences and schedules you host.
- 10 See your payment and transaction history and, for vendors, earnings, payouts, promotions, tax and financial reports.
- 11 File and manage claims, disputes and incidental charges.
- 12 Upload photos and documents for you.

Role changed? Splitt applies your new permissions within about 15 minutes. If ChatGPT still doesn't offer a new action, open the Splitt connection on the Plugins page and select **Refresh**.

SAFETY

You decide what changes

ChatGPT is fast, and it can misread a request. These habits keep your listings, bookings and money exactly the way you want them.

Read the request before you confirm

When ChatGPT asks to confirm a change, check the listing, the dates and any amount. If it isn't what you meant, deny it and say what you want instead. ChatGPT can remember your answer for that action for the rest of the chat, so only allow that for actions you're happy to repeat.

Cancelling costs more than it looks

Cancel a renter's booking and Splitt refunds them in full, whatever your policy says. The same happens if they decline new dates you proposed. A host cancellation can count toward your cancellation rate, unless you tell ChatGPT the reason is severe weather.

Messages from renters are only messages

Splitt tells ChatGPT that text written by other people, like a renter's message or a review, is information, not instructions. If a message asks for something ("refund me", "change the price"), that is not your request. Never confirm an action you didn't ask for.

Money stays on Splitt and Stripe

Splitt never asks for a card number in the chat: a paid promotion opens Stripe's checkout page instead. Damage claims, extra charges and payouts move real money, so ChatGPT asks you first. Payouts only go to your connected Stripe account.

KEY FACTS

- ✓ ChatGPT never sees your Splitt password. You type it on Splitt's page.
- ✓ Every action runs as you, with the same permission checks as the Splitt vendor dashboard.
- ✓ Splitt checks every request again, on every call, even after you have signed in.
- ✓ Access renews quietly in the background. After a few weeks without using Splitt in ChatGPT, you may be asked to sign in again.
- ✓ If your role changes, ChatGPT picks it up the next time its access renews.
- ✓ You can disconnect at any time (below).

Disconnect Splitt from ChatGPT

1

In ChatGPT

Open the **Plugins** page, open the Splitt connection and disconnect or delete it. Once it's removed, ChatGPT can no longer use Splitt.

2

If you think someone else has access

Reset your Splitt password with **Forgot password** on the Splitt sign-in page. That signs you out everywhere, and ChatGPT loses access within about 15 minutes. Then write to security@go-splitt.com.

PREFER CLAUDE?

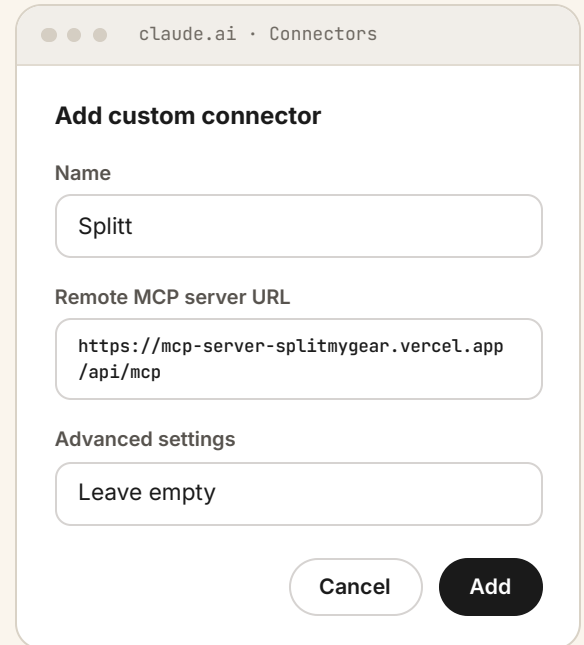

Splitt works in Claude too

Claude connects to the same Splitt server and uses the same Splitt sign-in page, so everything in this guide about your access, confirming changes and staying safe applies there as well. It works on [claude.ai](#), in the Claude desktop and mobile apps, and in Claude Code.

1 Add the Splitt connector

1. On **claude.ai**, open **Customize** and then **Connectors**.
2. Select **+**, then **Add custom connector**.
3. Name it **Splitt**, paste the Splitt server address from page 3 exactly, and select **Add**. Leave **Advanced settings** empty: Claude registers itself.

On a Team or Enterprise plan, an owner adds it once under **Organization settings** > **Connectors** > **Add** > **Custom** > **Web**, and each person then connects their own account. On the free plan you can add one custom connector.

The screenshot shows a web browser window titled 'claude.ai · Connectors'. Inside, there's a form titled 'Add custom connector'. It has three input fields: 'Name' with the value 'Splitt', 'Remote MCP server URL' with the value 'https://mcp-server-splitmygear.vercel.app/api/mcp', and 'Advanced settings' with the value 'Leave empty'. At the bottom right, there are two buttons: 'Cancel' and 'Add'.

2 Connect and sign in

1. Next to Splitt in **Connectors**, select **Connect**.
2. The Splitt sign-in page from page 5 opens. Check that it says you go back to **claude.ai**, then sign in with your Splitt email and password, or with Google.

3 Turn it on in a chat

1. In a chat, select **+**, then **Connectors**, and switch on **Splitt**.
2. Ask in plain words, the same way as in ChatGPT. Claude asks before it uses an action that changes something.

Choose what Claude may do

In the Splitt connector's settings you can switch individual actions off, or keep Claude asking before it uses them. Actions that only read are marked as such; cancelling, deleting and payouts always ask.

Claude Code

Run `claude mcp add --transport http splitt https://mcp-server-splitmygear.vercel.app/api/mcp`, then `/mcp` and choose **Authenticate**. The Splitt page warns you that the app runs on your own computer: that is expected here.

TROUBLESHOOTING

If something doesn't work

Most problems come from the ChatGPT plan, the account you signed in with, or a browser blocking the sign-in window.

WHAT YOU SEE	WHAT TO DO
No Developer mode switch in Settings	Check your ChatGPT plan (Plus, Pro, Business, Enterprise or Edu). On a workspace, ask your ChatGPT admin to allow it. Developer mode can't be on while Lockdown Mode is on.
The Splitt sign-in window doesn't open	Allow pop-ups for chatgpt.com, then open the Splitt connection on the Plugins page and connect again.
"Invalid email or password."	Use the email and password you use on go-splitt.com. Splitt shows the same message for a wrong email and a wrong password, on purpose.
No Google button	Set a password for your Splitt account first, then sign in with your email and that password.
"Too many sign-in attempts from your network."	Splitt pauses sign-in after 10 failed attempts in 10 minutes. Wait a few minutes and try again.
"This sign-in page has expired."	The sign-in page stays open for 10 minutes. Go back to ChatGPT and connect again.
ChatGPT can't see your listings or bookings	You may have signed in with a renter account, or your vendor account was approved after you connected (approval signs you out everywhere). Disconnect, then connect again with your vendor login.
"Not allowed for this account"	Your seat can't do that. Only the owner sees earnings or requests payouts, and staff can't change pricing rules.
"Splitt rejected the session"	Your Splitt session ended, for example after a password reset. Connect Splitt again in ChatGPT.
ChatGPT says it hit a limit	Splitt limits how many requests arrive each minute. Wait a minute and ask again, or ask for fewer things at once.
"You can only message a user you have booked with"	You can only message renters you already have a booking or a conversation with. Ask ChatGPT to reply in the existing conversation.
